**Intelligent Reporting for Sage 200**

# Get back in control of your business data with Spindle Report Scheduler

Spindle Report Scheduler provides automation of key and important reports by setting up a delivery schedule, ensuring the right information is supplied to the right people at the right time. This replaces the need to rely on manual intervention by physically having to select and filter information in Sage to produce a report.

Created as an in-built add-on module for Sage 200, Spindle Report Scheduler takes both your standard and customised Sage Reports and automate their delivery. This saves time and ensures quick delivery of important business information.

Spindle Report Scheduler will:

Automate the distribution of your key and important reports to any user with an email address in any format

Update data each time the report is distributed

Explore your data on your behalf and send reports onwards within your business.

Collect information from multiple data sources using the Sage Report Designer

Create and deliver smart business solutions direct to your inbox

Helps you to plan and make better information decisions about your organisation

Report across your business and easily distribute reports to your management team

Schedule reports to run automatically from report management panel

Recognises individual preferences which enables you to send reports to everyone in their preferred format

Access your optimised reports on your mobile and receive business intelligence wherever you are.

Access all historical information, analyse trends and see patterns from reports from within the Spindle Report Scheduler Spooler screen

**Spindle Report Scheduler works seemlessley with the other areas of the Spindle Document Management suite**
